everyone learns differently. That being said, his teaching style was very discouraging, and made me hate coding with a passion. His expectations are crystal clear, which is always appreciated. But for an introductory class, his expectations are way too high.

very tough grader. grading policy is clear but very rigid. you either get a 20/20 or a 10/20, no in between. no partial credit, no matter how small your mistake was. he's a genuinely nice guy but there are more accurate ways to evaluate students' knowledge.

I absolutely loved him but I can definitely see why he could be divisive. He is extremely clear in how things are graded and people got mad when he did what he said. He's also remarkably personable if you know how to talk to him. Would definitely recommend going to office hours as he's very willing to help if you're putting in the effort.

Solid professor, really funny, strongly opinionated, loves star wars. Took his class two years ago, the binary grading style (50% or 100%) on exams is tough but, he gives extra credit opportunities. Homework takes time, but are very informative.

He insists that you should self study, and the homeworks aren't actually bad to be honest. The exams are basically a joke since he allows AI in the exams, so it comes down to who is using claude and who isn't. He does give partial points even though the syllabus says he doesn't (I got a 13/20 in midterm 2 which got me to a 20/20 with extra credit)

It's difficult to fail this class if you do your homework and get atleast 10/20 on each exam. That being said, its difficult to get an A in this class due to his binary grading scale. You either net a 10/20 17/20 (make up points via other assignments) or 20/20

Do not take if you have not taken a Java class before. Quickly brushes over beginner concepts. Follows a binary grading system where you can either score 10/20 or 20/20. Points deducted for nitpicky reasons - even if with the correct output and following the program structure. Lectures are occasionally useful, but he provides VERY LITTLE feedback.

If you get anything other than perfect on an exam, it goes to a 50. It doesn't matter if your code runs correctly; it could be not writing your getters and setters. If you don't follow his instructions to a tee, you get a 50. Each midterm can go from 50 to 85 through extra credit and makeup exams, but this is NOT provided on the final. cooked.

Easily the worst professors to have to start my journey in CS. Was the only "highly-rated" option left for registering for classes. Not a bad guy in class and tries to make the class fun, but his grading policies and the way the class forces us to do self-study are mentally draining. Self-studying is a must in CS, but he makes it feel like a chore.

Very good lecturer. Makes the content clear. The biggest thing is that it is graded very heavily by tests. There are two midterms and one final, which make up 60% of the grade - if the code does not follow every requirement, you will get a 10/20 or a 20/20. Overall good professor

He DOES NOT teach. So beware of him only reading off the slides. You'll have to self-teach in this course. You're allowed to use outside resources during exams, which is helpful. Homework is extremely time-consuming, so do start early. He's not very accessible outside of class, so if OH time doesn't work for you beware he does not care.

Is he a good professor? No. If you want to learn from this course do not take him or be prepared to teach yourself. That being said, he allows you to use your resources on all exams which makes the class very doable even without prior experience. Having experience certainly helps, but it's manageable regardless. Homeworks can get tough but not bad.

Prof. Locklear is a good guy and will make sure you know Java in and out if you put in the work. He places emphasis on learning to code through the homework rather than his lectures, so there is a good amount of homework, and it can get quite difficult.

Will not give extensions at all. Tough grader. 3 exams, you either get a 50 or 100. Students who get 50 can take a mitigation exam and ec to receive 82.5. but no mitigation exam on final exam. its either 50 or 100. That being said he talks like he's forced to teach. I fell asleep multiple times. Also his belly can pop at any time so be careful. ggs

He has a binary form of grading which means if u don't get the thing perfect u end up getting F. He is rigid n nt understanding even tho he is ok with answering ques. He doesn't teach a lot and believes in learning while doing which isn't the best approach for intro classes. I got lost when the material went outside of what i had previously learnt.

For students seriously intending to enter the CS field, professor Locklear is the one you should look for. The assignments require you to start from scratch (no starter code) and they are hard, which is one thing you would wanna train yourself in an intro course. From my knowledge Locklear prepares students best regarding to concepts such as oop.

This is a great intro class but if you have never done java before, be careful as the midterm and final are graded on a binary scale (you get a 50 if anything at all goes wrong). Occasionally, the homework instructions contain errors as well. However, the prof is nice, prepares you very well, and loves star wars.

Prof. Locklear is one of those people who knows their stuff, but are not good teachers at all. Difficult to learn from and has a grading curve where you can only get 0, 50, or 100. Highly recommend to self-learn and to TAKE A PLACEMENT TEST before taking his class. Many people are known to Fail or withdraw, which is not worth it for an Intro class.

The professor is nice but really keeps his lessons only during class and office hours, he doesn't offer much help after class or anytime not on his hour. The grades are binary, so you only get a 0%, 50%, or 100% on your midterm and exam. DO NOT take him if you do not know Java. MOST PEOPLE WHO ARE UNFAMILIAR GET END WITH A C OR FAIL.

As a non-CS major student, this class was very challenging for me. He barely provides solutions for practice Qs. So, I had to figure out everything by myself, which improved my coding skills in the end. If you don't major in CS, I would recommend other professors.
