Super good at explaining, super knowledgeable, take her if you want a solid foundation. Her quizzes, projects and test are all fair. She is an exemplary teacher! Her lower reviews come from either people who are either bitter they didn't get handed an A or don't have a true passion for cs to put in the work.

The sarcastic humor made her lectures fairly enjoyable. Projects are hard but you(and/or claude) have ample time to retry. Quizzes are hard but not worth a whole lot. Exam was easy. People highkey trolling for struggling in this class grade wise. Tho i had the 9:30 am and not 8:00 am which might contribute to why people dislike her.

She knows her material and explains things pretty well, but the tests, quizzes, and projects were really difficult. The midterm was really easy but the final was difficult; projects take minimum 5 hours each and towards the end 8 hours for me. There was

I found it boring but serviceable; admittedly I fell asleep and did other stuff during lectures, but going over the slides gives you all the info you need + she has recordings. Quizzes can be tricky & projects take a lot of time. Midterm was easy but final was way harder & lowk made me cry (62.7% avg lol). Overall fine but got stressful at the end.

She is definitely a knowledgeable person and will help you a lot if you attend office hours. People who are complaining just don't want to try and get an easy grade, but I sure learned a lot from her. Pretty nice curve in the end so as long as you stay on top of everything you should be fine. Take her if you actually want to learn.

they call her 007, 0 coding practice finals, 0 fair questions on the quizzes, 7 dodged questions on ed discussion. she legitimately skips over highly asked questions about important aspects of the class. im suspecting she's doing this so more people fail as too many people did well on the first midterm. she cares so little and it's embarrassing.

Those who saying "As long as you study hard, you can gain something", yes, you can definitely apply this statement to any class. I almost got full marks in the mid-term exam, but on the 20% quizzes, each one had all kinds of traps that had nothing to do with what I had learned.

the quizzes are actual crimes for what they are, 20% of your grade on what it feels like trivia rather than anything. i diid decent on the midterm but i swear every one of those quizzes always have gotcha questions instead of anything useful. i honestly just think the design of the quizzes are flawed, she's an okay professor.

Not as bad as her reputation makes her out to be. Projects do take up a decent amount of time and the 4 quizzes are weighted pretty high for what they are. However, the midterm and final are very similar things that were done in classes and recitations. Attend every class, go to office hours when needed, and start projects early.

The grade for a C is a 72, the class average is a 73. The median grade for the midterm was a 58 other classes had a 90. A 30-minute quiz is worth more than your semi-weekly 40 hour projects. This is coming from an A student for the past 6 classes.

Take her negative reviews with a grain of salt. All you really need to do is find some time to study and make sure you attend recitations and lectures. Almost everybody says they are a better programmer coming out of her class. As long as you know some Java and have some time to study, you'll be fine.

Not bad. Data structures was fine as long as you know java. General advice, literally just go to class and go to recitation, and study. She gets a bad rep because 8 am, and a bunch of people don't show up to class and wonder why they fail the midterm.
