Prof. Clayton was wonderful! He gives really good lectures and engages students with the material very well. His homeworks are very helpful for learning and fun to do even though some of them can be a bit long. He allows cheatsheets on all exams, and everything comes from his lectures.

DIFFICULTY

**3.0**

Professor Clayton was very kind and knowledgeable. The class consists of lectures where you watch videos beforehand and workshops where you work on coding project. The midterm and final are harder than you'd expect- the final especially was a lot harder and ruined my A in the class so beware. Besides that, very great class, I highly recommend!

Love this professor! He is super friendly, explains the material well, and is open to helping students. Midterm and final are a bit tougher than you might expect, so study well. Otherwise, the class is pretty easy since he drops lowest homework, quiz grade, and will weigh the final more if you do better on that than the midterm.

This class requires you to understand coding so be ready to study by yourself. Lectures go through really fast and hard to catch up every single words he said. Homework videos are not enough for study the material because they missed many details you need to know. However the NYU's learning website and its YouTube videos can be really helpful.

Very caring and dedicated prof. Teaches really well but exams (pen & paper) make up 60% and these exams are out of 40 or 45 and brought up to 100, which means that the % you get will always seem considerably lower than your performance, demotivating. Course seems easy but picks up quick. No curves or round ups, your final grade is your final grade.

The assignments were doable but were time consuming, but the exams were harder than the practice problems he gave us. He told us the midterm review problems would be a bit more challenging than the actual midterm itself, but the midterm turned out to be harder, as did the final.

Take Prof Clayton!! Weekly learning modules/online quizzes plus his lectures were both helpful and organized. Assignments were straightforward but took hours each week to do if you get stuck. Midterm was harder than he said it would be which brought down my grade... but besides that he was a great teacher!!! Super nice and always excited to there.

Good professor. Him and his assistant were always accessible. If you do the learning modules and know how to do the assignments without cheating you'll be good. Just make sure to proof check your code for any sort of errors. The midterm and final weren't very hard if you know how to do the assignments.

I took Intro to Programming with Professor Clayton, he is an awesome professor. His lectures were well-organized and helpful. The assignments are engaging and not hard to do. He is helpful both inside and outside of class. Taking his course with him helped me build a solid foundation for my further study in CS. Really appreciated his teaching.

1. The midterm is not easy, instead, it is hard 2. He teach. He is a good teacher and everything in his class is meaningful 3. If you finish the assignment by yourself and do the module and quiz every time. A- at least can be guaranteed. You are dedicated, you get the grade. I love him very much! Overall a good teacher!

Professor Clayton is very knowledgeable and encouraging. He inspired us with useful examples and encouraged us to create things out of our own interests by applying knowledge in class. The class is arranged with care, and every project leaves us a huge space to create and practice. There was only one exam, and it was not that hard.

Intro to Programming was one of my favorite courses and was really fun! Professor Clayton makes the lectures very clear and is available to answer any questions. There were weekly workshops that allowed us to start the homework in groups, and the assignments were helpful and engaging. I recommend starting homework early and attending exam review.

As long as you read the modules before class, you will be able to understand the concepts. However, his exam questions aim to confuse you rather than to test understanding. All exam questions are marked on a right or wrong basis, no opportunity for you to show your work. I came out of this class knowing how to code, but the tests do not reflect it.

Dont let the negative reviews stop you from taking Clayton. He is my favorite of all CS professors Ive had. Failed my final (somewere in 50s or 60s) and still managed to end with an A-. That goes to show how accommodating he is. Work hard, have fun, take him! And Clayton, please teach higher level CS courses I BEG YOU!!!
