Dude, why to keep online exams if you are so much suspicious about so many things. He got angried in the class so many times, lol even on the microphone and he doesn't interact with the students at all. What is the use of his knowledge and even the class, when it feels like emotion-less person is speaking. Don't even want to go towards his accent.

My mind was blown in real time when I realized that Yang Tang has the most engaging lectures in the CS dept, even though he teaches one of the most difficult-to-teach, mechanistic courses. The projects are also phenomenal. Someone said he'll make you fall in love with CS all over again, and I couldn't agree more.

Idk if I got the course code right. I took his grad OS course, which is pretty tough but you learn absolutely nothing from an easy OS course. Loved it. His labs are fun, and his exams are structured very very well.

Prof tang will make you fall in love with cs all over again!! Prob the only professor in the dept who cares about students learning and have systems in place which makes that possible. The grading system of this class is so well thought out!! Lectures are really organized and professor spends so much time behind office hours even Friday nights!!

I did not get the best grades but that had nothing to do with the quality of the professor. I had health issues which he was so kind to accommodate throughout the semester. The labs were very difficult for me, other reviews can disagree but personally I went through hell and back for it. I learned a lot though. Thankful for the experience.

Greatest experience in NYU so far! Labs are perfectly doable given the detailed outlines in the lab instruction and the crash course. Each lab is allowed for a nearly a whole month to finish. Midterm and final exam are fair enough, questions all coming from the lectures slides (he has the best slides I've ever seen btw). Best professor!

First, lab isn't that bad. Honestly it requires deep understanding of filesystems/linux concept, but it's doable, and other than that you just need for-loops. Exam is hard but okay. Spend 2~3 days you can get solid grade ig. But don't take it if you have other major focus. It's a resume project but not job-related unless you work at NVIDIA/hardware idk

Class starts off easy, but the workload ramps up after the midterm. The project itself is a lot of work, and the final was MUCH harder than the midterm was. I only recommend the class because what you'll be learning is very marketable but, beware, this is not an easy A class. If you want an easy A class with a light workload, take something else

Simply the best CS professor at NYU. Extremely knowledgeable and excellent at explaining the content. Also, he is almost always available on Discord, and his office hours sometimes even go beyond midnight. Take his class if you want a challenging and fun course.

My favorite cs professor so far, very accessible outside of class, engaging lectures, and very passionate about teaching. There are 4 labs (worth 50% of your grade) which are difficult but very fair. You also get almost a month for each of them, so you can take your time on them. Overall, Challenging but very fair and rewarding, highly recommend!

Took one of the hardest undergrad courses in NYU-CS, but Prof Tang tries his best to make it funny and easier for us to understand. He is the kind of teacher that truly cares about students. Always replies to questions on discord in several minutes, I even remember seeing he answering another student at 3am. Will definitely take his other courses.

Professor Tang is the most accessible and caring professor I've had at NYU. So incredibly reachable, so willing to answer any questions. He will stay up until 1 am answering questions in office hours. Such a good guy. The course is admittedly very difficult, and you will spend a long time on labs, but the grade breakdown is very fair!

If you can, DEFINITELY take professor Tang. The GOAT CS professor @NYU and Im so glad I took his class. He genuinely cares for every student and wants them to succeed. Labs take a lot of time and can be intimidating but "the journey is the reward" and for me, that was so true! Learnt(& enjoyed) more in this class than the entire CS curriculum @NYU.

One of the best professors. Up-to-date slides; clear lectures; good hw with clear instructions; help with programming and intuitively understand system design; has professional experience; help you get job; always willing and available to answer your questions; very funny and generous; care about your feelings as well. Can't hope for more.

This is a step-up class from CSCIGA2436, you learn more analytics tools and techniques. I really enjoyed continuously building the project I worked on in 2436 in this class. I was able to discover more compelling results using smarter tools and compare the pro and cons of these tools in a horizon.
